The Culligan® OFSY Series
OMNI-FILTRATION SYSTEM
An adaptable, efficient solution for treating your high sediment waters.

The Culligan OFSY models offer a fully automated treatment process optimized to provide filtration of feed waters, particularly surface waters with suspended solids and high turbidity levels. The commercial models include a clarifier and filter in-series to provide eight different layers of filtering minerals to capture impurities. OFSYs come standard with Culligan’s smart controller to automate most flow control operations. Our design allows for easy integration of different chemical feed systems for pretreatment operations (coagulation, flocculation, and chlorination, etc.)

The OFSY Series is a part of the Culligan® Commercial and Industrial Solutions that combine durable and efficient equipment, systems experience, and technical expertise to meet your unique requirements. From planning your systems to installing your water treatment equipment, Culligan® Commercial and Industrial Solutions offer options that help deliver the quality of water to meet your needs. Consult with a Culligan® representative to create your solution.

CULLIGAN® COMMERCIAL & INDUSTRIAL ADVANTAGES:

- Simple System Integration
- Global Product Platform
- Flexible Configurations
- Quick Delivery / Easy Installation
- Exclusive Culligan® Advanced Electronics
  - Historical Operating Data
  - Alarm Recognitions
  - US Standard and Metric Readings
  - Remote Monitoring Options
  - Telemetry Options

Markets Served:
- Clinics
- Educational Facilities
- Energy / Power
- Food / Beverage Production
- Food Service / Restaurants
- Grocery
- Healthcare / Hospitals / Bio-Pharmaceutical
- Hospitality / Lodging
- Manufacturing
- Municipal Drinking Water
- Oil / Gas
OFSY Omni-Filtration Systems: Value at Every Level

Chemical Pre-Treatment
Every customer’s source water is unique and Culligan® offers many different chemical treatment systems to assist in such things as coagulation and disinfection. Culligan® can help configure and modularize storage tanks, pumps, mixers, and other instrumentation for seamless integration with the OFSY models to help improve the end product water and operational efficiency.

Clarifier
The closed, pressurized design of the clarifier improves the contact dynamics (flocculation) of the chemicals and contaminants lowering turbidity up to 90% in a fraction of the time required by an open clarifier. The tri-layer of media filtration in the tank gradually removes the large floc and prevents clogging the filter, which in turn promotes higher filtration velocities.

Filter
The second tank polishes the water to a superior level of clarity by passing it through five different layers of Culligan® media decreasing in granule size from top to bottom. This allows for filtration of tannins, iron, manganese, and other metals from the water, without impeding the flow rates.

Culligan® Smart Controller
OFSY models are shipped complete with a Culligan® electronic controller designed for easy reach and use by the installer. The controller is pre-programmed with service, backwash and conditioning modes that can be altered for different quantities and qualities of product water.
Warranty
Culligan’s OFSY models are backed by a limited 1-year warranty against defects in material, workmanship and corrosion. In addition, tanks carry a limited 5-year warranty.t

† See printed warranty for details. Culligan® will provide a copy of the warranty upon request.

Examples of Filter Applications
• Pretreatment—For water softeners, reverse osmosis and deionization systems
• Drinking Water—Turbidity reduction, chlorine reduction, improves taste and clarity
• Boilers—Turbidity reduction, reduce sludge blowdown
• Office Buildings—For heating plant pretreatment, tenant convenience, general housekeeping
• Telemetric Capability
• Differential Pressure Switch
• Side-mounted, eight-valve harness, connects the clarifier and filter. Guided perimeter designed diaphragm valves operate smoothly, free of water hammer and are easily accessible for service work
• Flow rates up to 100 gpm

Standard Features
• Culligan’s Smart Controller—More control over your equipment with programming and monitoring capabilities typically found in more expensive PLC controls, a variety of add-on options for advanced instrumentation and communication let you easily customize the system to help meet your needs
• Flow rates up to 100 gpm

Optional Features & Accessories
• ASME Code Tanks
• Stainless Steel Plumbing Harness
• Chemical Feed Systems
• Skid Mounted
• System can be configured for both same-source (factory-setting) and separate-source backwash
• Remote Display
• RS232, RS485, Modbus PLC Output

For over 80 years, Culligan® has made better water. Our global network, comprised of 800+ dealers and international licensees in over 90 countries, is dedicated to addressing your water-related problems. As a worldwide leader in water treatment, our sales representatives and service technicians are familiar with the local water conditions in your area. Being global and local position us to deliver customized solutions to commercial and industrial water issues that affect your business and your bottom line.
